

Problem Statement & Objectives

Problem Statement:

To help users verify the quality and authenticity of medicines and receive personalized health recommendations using AI technology. Improved medicine safety, personalized health guidance, and better-informed healthcare decisions.

Objectives :

- Develop a system to analyze medicine ingredients and determine their quality.
- Allow users to input symptoms and predict potential diseases.
- Suggest medicines based on user preferences (Ayurveda, Homeopathy, Allopathy).
- Identify fake medicines based on anomalies in ingredient composition.
- Design an intuitive web-based application for users and healthcare professionals.
